

PAPER/DOCUMENT DESTRUCTION SYSTEMS

SSI offers a variety of high-capacity, bulk-feed shredder models which produce small particles for paper document and security destruction.

SSI's security and document destruction system is a specially engineered combination of Dual-Shear® shredder and automated feed system. The combination is a high-production, batch fed shredding system that produces small, secure particles.

The system, which utilizes a patented Auto Sync Feed System* has a large feed hopper for easy bulk feeding. A conveyor/feed module force feeds the shredder, controlling the amount of paper being fed. Three different sizes of document shredding systems are available depending on the desired throughput rate.

SHREDDING SYSTEM FEATURES

- Batch feed "dump and run" capability
- Patented Auto Sync Feed System*
- High throughput; 2-8 tons per hour
- Processes wide variety of materials including tapes, CD's and DVD's
- Reliable low speed technology
- Automatic reversing on overload
- Secure particle size
- Long shredder cutter life
- Low noise, dust, horsepower and maintenance costs
- Patented SSP Severe Shock Protection™
- Complete material handling systems
- System engineering and manufacturing
- 24/7 factory support

* The Auto Sync Feed System is a patent held by Shredfast Inc.

SHREDDING SYSTEM OVERVIEW

Systems can be dumper or conveyor fed into the loading chamber for bulk feeding

Patented Auto Sync Feed System increases throughput and optimizes the feed of paper into the shredder
